

CS 250: The Linux Operating System  
Assignment 6  
*Writing BASH Scripts*

### **Introduction**

During this hands-on project, you will login to a Linux workstation and develop a BASH script experimenting with a few Shell language constructs and commands.

### **Assignment**

Write a shell script, named **delete**, that mimics the way the `rm` command operates, but rather than erasing any files, it would put them in the user's `.Trash` folder. To verify, the script then displays contents of the `.Trash` folder. The script then gives the user the choice to undelete. If so chosen, the script makes these files reappear where they were deleted and verifies the undeleting.

### **Submission Instructions**

Submit your **delete** script file on Blackboard.
