

CS 250: The Linux Operating System
Assignment 8
Writing BASH Scripts

Introduction

During this hands-on project, you will login to a Linux workstation and develop a BASH script experimenting with a few Shell language constructs and commands.

Assignment

Write a shell script, named `findfile`, that is invoked as follows:

```
findfile fileName dir1Name dir2Name ...
```

When invoked, `findfile` searches the named file in the directories specified. If the file is found in one directory, the current directory is changed to it. The script you develop must use a function called `myFind` to search for the file in the given directories.

Submission Instructions

Submit your **`findfile`** script file on Blackboard.
