CS 250: The Linux Operating System
Assignment 9
*Writing BASH Scripts*

**Introduction**

A palindrome is a string which reads the same forward as backward, as in radar or madamimadam (Madam, I—m Adam) but not abacab.

**Assignment**

Write a script, named `checkpal`, which receives a list of strings and outputs all of those that are palindromes. Output an error message if the script receives no parameters. The script must define and use a minimum of one function.

**Submission Instructions**

Submit your **checkpal** script file on Blackboard.
